

Infertility Services at Los Olivos

Thank you for selecting Los Olivos Women's Medical Group for the evaluation and treatment of infertility. We are committed to providing you with the highest quality of infertility management and the most current information on new technologies and treatments available in this field.

Our infertility team consists of physicians, nurses, laboratory technicians and counselors. Los Olivos provides a wide range of infertility services that include: ovulation induction, intrauterine insemination, donor sperm insemination, ovarian hyper-stimulation, vaginal ultrasonography, saline infusion sonography, operative laparoscopic procedures including laser and Argon Beam technologies, tubal microsurgery, reversal of tubal ligation, and advanced hysteroscopic surgery for treatment of fibroid tumors, uterine septa and proximal tubal obstruction. We also specialize in diagnosis and treatment of recurrent pregnancy loss.

Please complete the infertility history sheets found on our website. Bring these and any prior infertility records to your first visit. Your initial evaluation includes a complete discussion of infertility, its causes and treatments. During this visit a personalized treatment plan will be created. You will be given an infertility booklet that may be used as a reference guide during your treatments.

At Los Olivos much of our emphasis is on patient education. We encourage you to read the material given to you. If at any time you do not understand the strategy or treatment plan please let us know so that we can respond to your questions. Many infertile couples have special emotional needs. We will make every effort to recognize and address these needs.

Should you have suggestions on how we can better serve you, please share them with us.
